Stillwater Fire Tower sits on the summit of Stillwater Mountain at an elevation of 2264'. Recent documentation that a signal tower here was a primary "station" in the NYS Survey of the Adirondack Wilderness by Verplanck Colvin in 1882, has established Stillwater Mountain as a historic landmark. The present 1919 tower was closed in 1988 and reopened in 2016.

Restoration of the tower began in 2009 as a partnership between the New York State Department of Environmental Conservation and a volunteer group,

Friends of Stillwater Fire Tower.
